MANUFACTURERS OF THE ORIGINAL CRITERION GATE

Since 1950

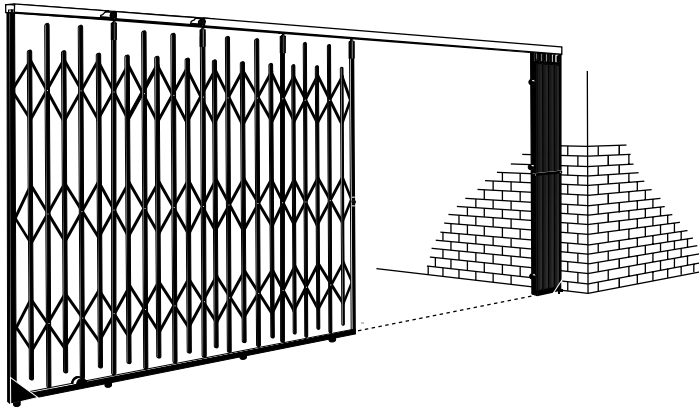

THE FINEST FOLDING GATE EVER MADE.

LT SERIES GATES

Our LT gates are most popular for loading dock applications and pedestrian control. This is our most economical gate but still manufactured to our "First Quality" Criteria. The full lattice is versatile and can be used to cover a variety of opening types. We also manufacture a full portable LT gate on wheels for temporary applications. Its collapsible design allows it to fit many sized openings with ease.

LT series

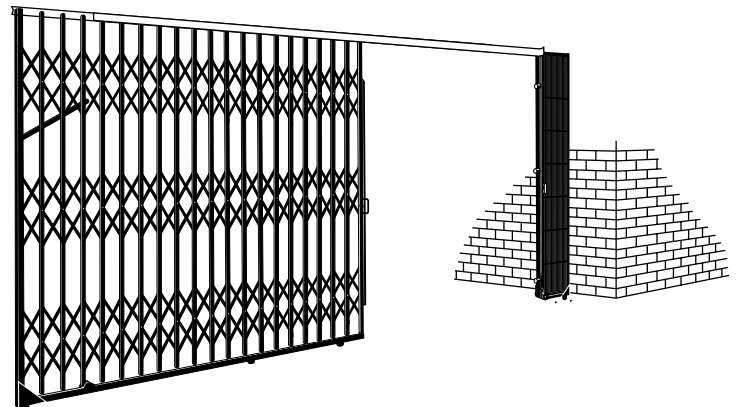

EG SERIES GATES

The standard for a balance between economy and security. The EG Gate is our most popular security gate for storefront applications and other moderate security purposes.

DC SERIES GATES

Our most secure gate. All DC gates include double vertical channels for each vertical element which results in our most secure gate design. Multiple lattices traveling horizontally provide maximum durability and security for our most security minded clients.
